Full Name	**Alfred Mokgohloa**		
Contacts (email, github and phone number)	0840930025 | mokgohloally95@gmail.com | https://github.com/DeadMan-Moc		
Citizenship/ Date of Birth/ EE Status	South African	22 March 1995	African Male
Resides	Johannesburg		
Current Role	Software Developer		
Notice Period	15 days or less		

NOTES

Versatile experienced **Software Developer** delivering secure, scalable, and reliable software solutions across major financial institutions. Skilled in **Java**, **Spring Boot**, **C#**, **Node.js**, **SQL**, and **Azure**, with deep experience in **production support**, **regulatory compliance**, **API development**, and **cloud modernization**.

I have worked on mission-critical banking platforms including **Investec Corporate Cash Management (CCM)**, **Investec Programmable Banking**, and African Bank's **Isiko Lifestyle Solution** and **Stokvel Account**.

My background combines strong engineering skills with hands-on experience resolving **AML issues**, **account duplication**, **payment failures**, and **document generation (statements, proof of account)** issues in live banking environments.

I am committed to stability, performance, automation, and delivering real business value through technology.

EDUCATION:

Institution	**Period of Studies**	**Degree/Certificate Name**
WeThinkCode_	March 2018 – September 2020 (Incomplete)	National Certificate in Information Technology, System Development
Umuzi Academy	2020	National Certificate in Information Technology, System Development
Kgakoa High School	2013	Matric

ACHIEVEMENTS:

- WRCHack2019 Winner
  - 1st Position

CAREER OVERVIEW

DATE	**COMPANY**	**POSITION**
March 2020 – 16 August 2023	Investec	Software Developer

October 2024 – December 2024	Staffing Logistics, (ABinBev(SAB))	Sorting
December 2024 - Present	Analytikus	Software Developer

WORK EXPERIENCE

INVESTEC **March 2020 – September 2023**

Investec | Your Bank & Specialist Financial Partner - South Africa

Software Developer

Business Unit: ICIB

As a Software Developer within Investec's CCM team, I worked on large-scale financial systems, API development, automation tooling, and daily production support. My work ensured system reliability, regulatory compliance, and improved operational efficiency across corporate and intermediary banking.

Responsibilities at Investec:

Daily Production Support (Live Banking Issues)

- Maintained high-volume transaction systems for corporate customers.
- Led migration of legacy systems to **Azure**, improving scalability and observability.
- Built and maintained RESTful APIs in Java Spring Boot for banking integrations.
- Developed automated testing suites using **Selenium** and **JUnit**.
- Supported and enhanced CI/CD pipelines via GitOps, Jenkins and Azure DevOps.
- Worked closely with operations, QA, and compliance teams to ensure secure financial operations.

Daily Production Support & Live Banking Fixes, handled high-priority production issues impacting real banking customers:

- Fixed AML issues impacting compliance workflows.
- Solved account duplication issues, ensuring data accuracy and preventing downstream failures.
- Resolved document generation issues (statements, proof of account, tax documents).
- Assisted in resolving payment failures, ensuring client transactions processed correctly.
- Provided live support under strict SLAs, ensuring platform uptime and stability.4

Corporate Cash Management (CCM) Development:

- Developed RESTful APIs in Java Spring Boot for:
    - **Updating client details** (KYC, address changes, contact details).
    - Retrieving transaction history for corporate clients and intermediaries.
    - And many more.
- Built secure, optimized endpoints integrated with Investec's internal CRM, payments engine, and document generation services.
- Built secure, optimized endpoints integrated with Investec's internal CRM, payments engine, and document generation services.
- Contributed to back-end logic for reconciliation, audit trail accuracy, and reporting.

Automation Tools & System Efficiency:

- Assisted in designing and building automation tools to improve operational efficiency and reduce manual intervention.
- Automated repetitive production support tasks such as:

    - Document generation checks (statements, proof of account).
    - Transaction and payment validation workflows.
    - Client detail update validations.
- Integrated automation scripts into CI/CD flows to increase deployment reliability.
- Enhanced monitoring and alerting tools to proactively detect system issues.

System Modernization & Cloud Migration
- Participated in migration of legacy components to Microsoft Azure, improving uptime and scalability.
- Refactored older services to be cloud-compatible and easier to maintain.
- Assisted with deployment pipelines, environment configuration, and performance tuning.

Investec Programmable Banking (OfferZen Collaboration)
- Developed and tested programmable banking APIs for external fintech builders.
- Helped implement secure authentication (API keys, client ID, client secret).
- Improved real-time data access for third-party applications.
- Supported documentation, sandbox testing, and developer engagement with the OfferZen community.

STAFFING LOGISTICS **October 2024 –December2024**
Contracting at ABInBev(SAB)
Sorting Team
- Short-term role assisting with logistics optimization.
- Supported warehouse sorting processes.
- Collaborated with technical teams on identifying automation enhancements.

ANALYTIKUS **December 2024 – Present**
Contracted to African Bank
Software Developer
Business Unit: IT

As part of Analytikus' engineering team embedded at African Bank, I help build, enhance, and integrate digital financial products within the Isiko Lifestyle ecosystem, including the Stokvel Account and event-based financial solutions.

Isiko Lifestyle Solution (African Bank)
A culturally grounded financial platform enabling customers to plan and fund life events (funerals, weddings, celebrations, etc.).
Contributions:
- Developed and integrated REST APIs using Spring Boot and Node.js for savings, loans, packages, and marketplace modules.
- Designed and deployed microservices in Docker with NGINX for routing and traffic management.
- Implemented GitOps workflows, improving consistency and deployment reliability.
- Worked with UX, testing, and product teams to make Isiko accessible, reliable, and culturally aligned.

Stokvel Account (Part of Isiko Offering)

A digital community savings account supporting up to 100 members.

Contributions:

- Added tiered interest rate logic, improving accuracy and performance for large Stokvel groups.
- Implemented backend logic for member management, account transparency, and executive signatory control.
- Improved digital onboarding including constitution creation and verification processes.
- Ensured seamless integration between the Stokvel module and African Bank's core systems.

PROJECTS

Isiko Lifestyle Solution – African Bank

Tech: Java, Spring Boot, Node.js, Docker, NGINX, SQL
A culturally focused financial and lifestyle platform helping customers plan and fund major life events (weddings, funerals, celebrations).

- Developed and integrated backend services and REST APIs.
- Connected financial modules (savings, loans, packages) with the Isiko marketplace.
- Implemented microservices with Docker and routing via NGINX.
- Strengthened data validation and secure financial flows.

Stokvel Account – African Bank (Part of Isiko Offering)

Tech: Java, Spring Boot, SQL
A digital group savings account supporting up to 100 members per stokvel group.

- Built backend logic for group management, executive signatories, and transparency.
- Implemented tiered interest functionality and onboarding workflows.
- Integrated Stokvel services into African Bank's core systems.

Programmable Banking – Investec (OfferZen Collaboration)

Tech: Java, REST APIs, OAuth, Spring Boot
Open banking platform enabling developers to build custom integrations with Investec.

- Built and tested API authentication and key management components.
- Enhanced real-time API data access.
- Supported sandbox, documentation, and developer community initiatives.
